

# RECYCLED LDPE 再生低密度聚乙烯

**ZERO WASTE 零浪费**

## **RECYCLED LDPE (Low-density Polyethylene)**

LDPE is one of the most widely used materials for packaging, which also makes it one of the most commonly found types of litter. Recycling LDPE helps to protect the environment and saves valuable resources. Recycled LDPE is just as good as virgin LDPE.

LDPE是日常生活中常用的塑料之一，广泛运用于薄膜制品等软包装领域。回收工业边角料再生的LDPE，性能上与新料LDPE相近，同时可以减少环境污染，实现可持续发展。

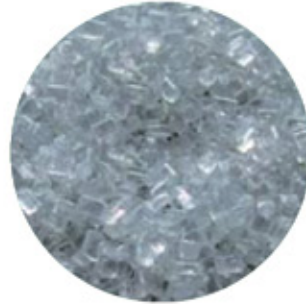

**EVERY 2.5 PIECES OF LDPE POLYBAG RECYCLED = 1 PIECE OF POLYBAG SAVED FROM ENTERING THE LANDFILL**

**每回收2.5个低密度聚乙烯袋 = 从垃圾堆中拯救了1个塑料袋**

**Recycling process of LDPE 低密度聚乙烯的回收过程:**

Post-industrial waste of polyethylene is collected  
回收工业边角料

Turn it into small pieces and form them into pellets  
把它们切成小块并制成颗粒

Recycled LDPE polybag  
再生低密度聚乙烯塑料袋

**Certificate 证书:**

**The Global Recycle Standard (GRS) 4.0**

'The GRS is an international, voluntary, full product standard that sets requirements for third-party certification of recycled content, chain of custody, social and environmental practices and chemical restrictions.'

<https://certifications.controlunion.com/en/certification-programs/certification-programs/grs-global-recycle-standard>

再生料证书是GRS认证, 通过过程监控, 证明材料是再生料。
